	Index	15

1 Package morbid

1.1 Modules

- **admin** (*Section 2, p. 4*)
- **models** (*Section 3, p. 6*)
- **tests**: This file demonstrates writing tests using the unittest module.
(*Section 4, p. 11*)
- **urls** (*Section 5, p. 12*)
- **views** (*Section 6, p. 13*)

2 Module *morbid.admin*

2.1 Class *FeatureAnalyticTicketAdmin*

django.contrib.admin.ModelAdmin —
morbid.admin.FeatureAnalyticTicketAdmin

2.1.1 Class Variables

Name	Description
list_display	Value: 'analytic', 'ticket', 'feature', 'value'

2.2 Class *TargetPriceAdmin*

django.contrib.admin.ModelAdmin —
morbid.admin.TargetPriceAdmin

2.2.1 Class Variables

Name	Description
list_display	Value: 'analytic', 'date', 'price', 'ticket'

2.3 Class *TicketAdmin*

django.contrib.admin.ModelAdmin —
morbid.admin.TicketAdmin

2.3.1 Class Variables

Name	Description
list_display	Value: 'name', 'long_name'

2.4 Class *FeatureAdmin*

django.contrib.admin.ModelAdmin —
morbid.admin.FeatureAdmin

2.4.1 Class Variables

Name	Description
list_display	Value: 'name', 'unit', 'display_in_frontpage'

3 Module morbid.models

3.1 Class Unit

The units of the feature

3.1.1 Methods

<code>__unicode__(self)</code>
The object return name

3.1.2 Class Variables

Name	Description
name	Name of the unit of measure Value: <code>models.CharField(max_length= 200)</code> (<i>type=str</i>)
value	The value (sign) of the measure (days, percent) Value: <code>models.CharField(max_length= 200)</code> (<i>type=str</i>)

3.2 Class Feature

The feature of the measure

3.2.1 Methods

<code>__unicode__(self)</code>
The object return name

3.2.2 Class Variables

Name	Description
name	Name of the measure Value: <code>models.CharField(max_length= 200)</code> (<i>type=str</i>)

continued on next page

Name	Description
unit	The units of the measure Value: <code>models.ForeignKey(Unit)</code> (<i>type=Unit</i>)
display_in_frontpage	Boolean to display in frontpage Value: <code>models.BooleanField()</code> (<i>type=boolean</i>)
description	Description of the feature Value: <code>models.TextField()</code> (<i>type=text</i>)

3.3 Class Analytic

django.db.models.Model  morbid.models.Analytic

Analysing analytic

3.3.1 Methods

natural_key (<i>self</i>)
Required for serialization
Return Value string

--unicode-- (<i>self</i>)
The object return name

3.3.2 Class Variables

Name	Description
name	Name of analytic Value: <code>models.CharField(max_length= 200)</code> (<i>type=str</i>)
number_of_companies	Number of tp analytic released Value: <code>models.IntegerField()</code> (<i>type=integer</i>)
number_of_tp	Number of target prices released by analytic Value: <code>models.IntegerField()</code> (<i>type=integer</i>)
volatility	Measure of uncertainty Value: <code>models.IntegerField()</code> (<i>type=integer</i>)
last_target_price	Last target price analytic released Value: <code>models.FloatField()</code> (<i>type=float</i>)
slug	Slug to reach the page of analytic Value: <code>models.SlugField()</code> (<i>type=str</i>)

3.4 Class Ticket

The ticket (or more precise to call it a company) name

3.4.1 Methods

natural_key (<i>self</i>)
The natural return key – not index (pk), but the name (short name) of the ticket
Return Value string

--unicode-- (<i>self</i>)
The object return name

3.4.2 Class Variables

Name	Description
name	Name of the ticket (AAPL, GOOG) Value: <code>models.CharField(max_length= 200)</code> (<i>type=</i> <code>str</code>)
long_name	Full name of the ticket (Apple Inc, Google Inc) Value: <code>models.CharField(max_length= 200)</code> (<i>type=</i> <code>str</code>)
last_stock_price	Last stock price of the ticket (live update maybe) Value: <code>models.FloatField()</code> (<i>type=</i> <code>float</code>)
number_of_analytics	Number of analytics analyzing the ticket Value: <code>models.IntegerField()</code> (<i>type=</i> <code>integer</code>)
number_of_tp	How many target prices does the ticket have Value: <code>models.IntegerField()</code> (<i>type=</i> <code>integer</code>)
consensus_min	Minimum value for the consensus measure Value: <code>models.FloatField()</code> (<i>type=</i> <code>float</code>)
consensus_avg	Average value for the consensus measure Value: <code>models.FloatField()</code> (<i>type=</i> <code>float</code>)
consensus_max	Maximum value for the consensus measure Value: <code>models.FloatField()</code> (<i>type=</i> <code>float</code>)
slug	The slug to reach the page Value: <code>models.SlugField()</code> (<i>type=</i> <code>str</code>)

3.5 Class FeatureAnalyticTicket

The place where analytic, ticket and feature meets

3.5.1 Methods

<code>--unicode--(self)</code>
The object return name
Return Value string

3.5.2 Class Variables

Name	Description
value	The value of the feature Value: <code>models.FloatField()</code> (<i>type=float</i>)
feature	Defines the type of the feature (how near, fixation, ...) Value: <code>models.ForeignKey(Feature)</code> (<i>type=Feature</i>)
analytic	The analytic for which the feature was calculated Value: <code>models.ForeignKey(Analytic)</code> (<i>type=Analytic</i>)
ticket	The ticket on which the feature was calculated Value: <code>models.ForeignKey(Ticket)</code> (<i>type=Ticket</i>)

3.6 Class TargetPrice

The list of all the target prices to show to people

3.6.1 Class Variables

Name	Description
date	The date of released target price Value: <code>models.DateField()</code> (<i>type=Date</i>)
price	The price of the target price Value: <code>models.FloatField()</code> (<i>type=Float</i>)
ticket	The ticket on which target price was released Value: <code>models.ForeignKey(Ticket)</code> (<i>type=Ticket</i>)

continued on next page

Name	Description
analytic	The analytic, which published the target price Value: <code>models.ForeignKey(Analytic)</code> (<i>type=Analytic</i>)

4 Module `morbid.tests`

This file demonstrates writing tests using the unittest module. These will pass when you run "manage.py test".

Replace this with more appropriate tests for your application.

4.1 Class `SimpleTest`

`django.test.TestCase` —
`morbid.tests.SimpleTest`

4.1.1 Methods

<code>test_basic_addition(<i>self</i>)</code>

Tests that 1 + 1 always equals 2.

5 Module morbid.urls

5.1 Variables

Name	Description
urlpatterns	Value: patterns('morbid.views', url(r'^\$', 'index'), url(r'^anal...

6 Module morbid.views

6.1 Functions

index(*request*)

Index page

The main page of the app

Return Value

Http Response

ticket(*request, slug*)

Ticket page

Parameters

slug: the request for the specific ticket

Return Value

Http Response. If the ticket was not found – rises the 404 error

analytic(*request, slug*)

Analytic page

Parameters

slug: the slug to reach the page

Return Value

Http Response. If the analytic was not found by the slug – 404 error rises

feature_by_ticket(*self, slug, feature_id*)

The feature return management on the ticket page

Parameters

slug: the slug to reach the ticket

feature_id: the feature id to return

Return Value

Http Response. If the ticket was not found using the slug – 404 error rises

JSON only

feature_by_analytic(*self, slug, feature_id*)

The feature return management on the analytic page

Parameters

slug: the slug to reach the

feature_id: the feature id to return

Return Value

Http Response JSON only. If the analytic was not found using the slug – 404 error rises

search(*self*, *search_me*)

The search of the page**Parameters****search_me**: The string to query search the database**Return Value**

Http Response in JSON.
